MEP | SAWING AND WIDE SOLUTIONS

REVOLUTIONIZING THE FUTURE OF METAL CUTTING THROUGH INNOVATIVE SUSTAINABLE TECHNOLOGIES

"... Our products and services for metal cutting are transforming the future of digital factory by offering a wide range of solutions to improve the efficiency and automation of production processes: this holistic approach has actually consolidated Industry 4.0 standards and is helping to define the new horizons of Industry 5.0 through programming and management, control and monitoring software applications, exclusive cutting cycles and integration services."

MEP GROUP

We are specialized in the design and production of band and circular sawing machines for metal cutting that meet the most varied needs in the field of forming and chip removal of ferrous and non-ferrous materials.

Pioneer of digitalization in the sawing machine industry, the company has always attached the utmost importance to process automation in order to remain competitive in the market: **the wide range of sawing machines is made up of standard automation and digitalization solutions that can be enhanced with customized solutions according to customer needs.**

Moreover, as an all-round solutions provider, we offer **not only cutting-edge sawing machines and integrated services, but also high-tech peripheral devices and innovative accessories.**

"... Believing that digitalization is the key to remaining competitive in the market and improving the quality of products and services, our goal is to promote innovation and sustainable development by putting at the service of our customers solutions that integrate the knowledge gained during the digitalization process: actually, as part of our business strategy, we position ourselves as a pioneer in the digitalization of our processes and the continuous search for new technologies aimed at improving our efficiency, precision and productivity.

...

Digitalization, accelerated by the recent introduction of artificial intelligence, remains the beating heart of our operations, from the development and design of our products, to manufacturing and logistics, and we are convinced that the direct knowledge of digital technologies acquired through observation, use and daily practice is the differentiating element that allows us to perform best in the market by offering solutions suitable for every type of customer."

PRODUCTION PROCESS

The excellent cutting precision of MEP machines is largely due to their G25 cast iron frames, which are deburred and then blasted with steel shot prior to painting. To ensure maximum flexibility in production, a large number of these painted, cast iron frames are always kept in stock ready for machining.

Nearly all material is processed in MEP's three FMS machining centres. These are served from a single automated warehouse system capable of handling a large number of different parts uninterruptedly, even overnight, to ensure maximum flexibility in production.
Each machining centre has its own tool store and preset system to change tools whenever they no longer conform to the requirements of the machining program.

MACHINED CAST IRON STORES

PRE-ASSEMBLY

ASSEMBLY ISLANDS

A measuring system that operates at a controlled temperature samples the dimensions of machined parts to ensure constant uniformity. Once machined, cast iron parts are stored in a large warehouse ready for picking and assembly.

A dedicated department assembles all complex mechanisms and performs all adjustments and calibrations that require particular care. 10 assembly islands, each handling limited quantities at a time, are served by the high speed FMS machining centres and large castings store to ensure extremely flexible production and to reduce delivery times for almost 50 different models of sawing machine.

COBRA

THE IDEAL SOLUTION FOR LIGHT ALLOYS

MEP is specialized in the cutting of all types of ferrous material and, with the COBRA line, it completes its offer by providing solutions for those who need to cut light alloys. Aluminium, bronze, copper, etc. can therefore be cut ensuring excellent finishing and production. Moreover, our engineering team can develop customized solutions for materials or extruded with irregular geometries. Thanks to the COBRA range, MEP further strengthens its position as a SINGLE SUPPLIER FOR ANY CUTTING NEED!

MANUAL

Ideal sawing machines for small size production batches, trim cuts or cuts of parts. Presence of the operator is necessary during the cutting cycle and, where appropriate, he shall also measure the piece to cut. Due to the characteristics of the circular blade, the cut finishing is smooth.

SEMI-AUTOMATIC

Ideal sawing machines for medium size production batches and cuts in series. Presence of the operator is necessary for starting the cutting cycle and, where appropriate, he shall also measure the piece to cut.Due to the characteristics of the circular blade, the cut finishing is smooth.

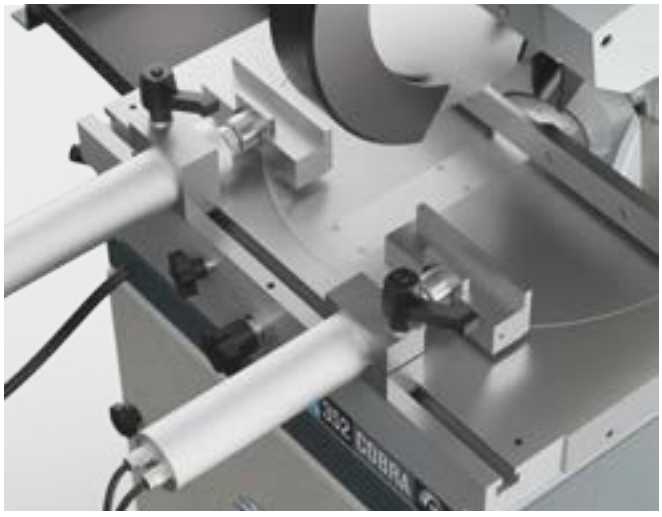
AUTOMATIC

Ideal for both large size production batches even on multiple work shifts and cuts in series in continuous cycle. Presence of the operator is not necessary during the cutting cycles, which can also automatically measure the piece to cut. Due to the characteristics of the circular blade, the cut finishing is smooth.

COBRA
352 MA

MITER CUTTING • LIGHT ALLOYS • TUBES • PROFILES • EXTRUDED

COBRA 352 MA, manual pivoting sawing machine with hard-metal teeth blade to cut light alloys, aluminium profiles and solids mitering from -45° to +45°. The saw head is vertically adjustable to also perfom cuts with head tilting from 0° to +45°.



HEAVY-DUTY

• The cast-iron structure absorbs vibrations and ensures greater cutting stability and longer blade life.

• The transmission system equipped with pulleys and belts ensures high rigidity.

• The large working surface equipped with a turning table assembled on a thrust bearing of diameter of 425 mm ensures maximum cutting stability.

• The automatic coolant spray mist device, activated only when the cycle starts so as to avoid waste, grants an excellent blade cooling and longer life.

USER-FRIENDLINESS

• The turning cutting table is assembled on a central pin and thrust bearing thus allowing an easy and smooth rotation at any angle and turning along with the saw head thus preventing to cut it through.

• The mechanical stops at -45°, 0° and +45° allow the quick positioning of the saw head.

• The rapid locking/unlocking clamping unit sliding longitudinally to the right and left of the saw head allows to safely perform even precise miter cuts.

• The pneumatic vice closing synchronized with the head down feed rate reduces execution time.

MEP's passionate team of designers and technical experts use the latest mechanical design software to be at the forefront of metal cutting technology and to choose the most innovative and advanced solutions to all possible needs in metal cutting.

DESIGN AND PRODUCTION OF CUSTOM CUTTING LINES

MEP's technical staff are able to design and build custom cutting machines and equipments to meet all possible needs.

DO YOU NEED A SAW?

WE MAKE YOUR OWN SAW!

SERVICE & SUPPORT

The Mep After Sale Service supports Customers with a range of services that for years have been one of the Company's excellence.

SPARE PARTS

Our technical staff is always ready to guarantee you the best assistance in the identification of the spare parts, even for machines out of production, and shipping by the fastest couriers within 24-72 hours after placing the order.
Moreover, storage and modern logistics ensure that our spare parts warehouse is constantly optimized in order to guarantee maximum availability.

MAINTENANCE PLANS

A regular maintenance has several benefits: less frequent failures and breakages, longer life of the sawing machine and its parts, more efficient system.
Find out which maintenance plan is the most suitable for your production needs or check if the maintenance KIT suitable for your sawing machine is available. Maximize efficiency to avoid any unpleasant events! Prevent expensive downtime by relying on the experience of our after sale service team.

TRAINING PLANS

Conceived for your MEP sawing machines or cutting lines: these cutting-edge courses are oriented to customers and workshop practice and they are about notions and practice directly on the machine!
Stand out from the competion by taking full advantage of the potential of your sawing machine!

OVERHAUL

Restore the efficiency of your sawing machine by improving productivity, cutting precision and safety.

INTEGRATIONS AND OPTIMIZATIONS

Upgrades to enhance the software version in use, along with the integrations needed to connect its parts with other systems, maximize the efficiency of your workshop by making the most of its potential.

OUR EXPERIENCE AND SUPPORT TO GRANT YOUR EFFICIENCY, ALWAYS!

AFTER SALES PROGRAM

Given the primary importance of Customer Satisfaction, particular attention has been paid to the management of the After Sales Service by a highly specialized internal staff that constantly interacts with quality control, Authorized Customer Service Centres, Sales Office and End Customers.
